# Private GNU/Linux Tutoring

Computers control most of our daily lives, yet we have virtually no control over them. Most programs are sold to us under a *restrictive* license that prevents us from studying, modifying, and sharing the programs with friends and family that may need it. As a result, how computers operate is almost entirely outside of our control. This is not how it has to be, there is another way.

GNU/Linux is an Operating System (OS) that has been developed to respect your freedoms. This gives you the freedom to run, copy, distribute, study, and change the programs as you desire. Thus you have power over the computer, rather than the computer having power over you.

If this sounds interesting to you, then consider enlisting me as a private tutor. I am looking for people in the following categories:

- Adolescents – K-12 computer classes are often weak, empower yourself instead.

- College Students – Get ahead in Computer Science, or just learn how to use a free OS.

- "Power Users" – Gain full control of your desktop with Free (as in Freedom) Software.

- Professionals – Learn to use GNU/Linux in addition to iOS and/or Windows.

I will work with you in order to develop a specialized lesson plan based on your desires and my skill set. My skills include, but are not limited to, CLI (Command-Line Interface), Linux Systems Programming, C, Python, Cryptography (GPG, X.509), Minetest (MineCraft-like video game), and LaTeX(document preparation system). I do not teach web development, nor computer basics (i.e. Word, Excel, web-mail, &c), nor do I provide Academic Tutoring.

Send me an e-mail in order to set up an appointment. Price is \$20/hour. Must be within 5-10 miles of Orenco Station (negotiable).
